

Flowmeter with paddle wheel for continuous flow measurement

- Economic integration in pipe systems without any additional piping
- Optic or magnetic measuring principle
- Configurable output: 1 analog 4...20 mA and/or 1 transistor output (frequency or switch)
- Outputs configurable (through interface on USB port with PC)

Type 8012 can be combined with...

Type 8619
multiCELL
transmitter/controller

Type 2301 (8692)
ELEMENT control
valve system

Type 8611
Universal process
controller eCONTROL

Type 8032
Flow transmitter

Type PLC

The paddle wheel flowmeter for continuous flow measurement is especially designed for use with neutral, slightly aggressive, solid free liquids in its magnetic measuring version and for use with liquids which let pass the infra-reds in its optic measuring version.

The 8012 is made up of a fitting (S012) and an electronic module (SE12) which are connected together with screws. The Bürkert designed fitting system ensures simple installation into all pipes from DN06...DN65. It can also be installed in fluid block systems.

The 8012 produces a configurable frequency pulse signal, proportional to the flow rate, which can easily be transmitted and processed by a Bürkert remote transmitter/controller, or a configurable switch output or a 4...20 mA signal.

General data	
Compatibility	With Bürkert S012 fitting (see ordering chart)
Fitting process connections	
Metal	Internal or external thread (weld ends, clamp or flange on request)
Plastic	True union or external thread (spigot on request)
Materials	
Housing / Seal	PPS / EPDM
M12 fixed connector (gland on request)	PA
1 meter cable	PVC
Wetted parts	
Fitting	Brass, stainless steel 1.4404/316L, PVC, PP
Paddle wheel, holder	PVDF
Axis and bearing / Seal	Ceramics (AL ₂ O ₃) / FKM (EPDM option)
Electrical connections	Free positionable 5-pin M12 male fixed connector (or with 1 m cable via cable gland, on request)
Connection cable	1.5 mm ² max. cross-section
Complete device data (fitting + electronic module)	
Pipe diameter	DN06...DN50 (DN65 on request)
Measuring range	0.3...10 m/s
Measuring element	Optical – infra-red (or magnetic paddle wheel, on request)
Medium temperature with fitting in	
PVC/ PP	0...+60 °C (+32...+140 °F) / 0...+80 °C (+32...+176 °F)
Brass or stainless steel	-15...+100 °C (+5...+212 °F) (if T° ambient ≤ 45 °C) or -15...+90 °C (+5...+194 °F) (if 45 °C ≤ T° ambient ≤ 60° C)
Medium pressure max.	PN10 (145 PSI) (with plastic fitting), PN16 (232 PSI) (with metal fitting) – see pressure/temperature chart
Viscosity / Particles rate	300 cSt max. / 1 % max. (particle size 0.5 mm max.)
Measurement deviation²⁾	
Teach-In	±1 % of the measured value (at Teach-In flow rate value) ¹⁾
Standard K-factor	±2.5 % of the measured value ¹⁾
Linearity	±0.5 % of F.S.* ¹⁾
Repeatability	±0.4 % of the measured value ¹⁾

¹⁾ Under reference conditions i.e. measuring fluid = water, ambient and water temperature = 20 °C (68 °F), while maintaining the minimum inlet and outlet distances and the appropriate internal diameter of the pipes.
* F.S. = Full scale (10 m/s)

²⁾ = "measurement bias" as defined in the standard JCGM 200:2012

Electrical data	
Power supply (V+)	12...36 V DC, filtered and regulated
Current consumption	< 60 mA (at 12 V DC for current version, without load)
Protection	Reversed polarity of DC: protected Voltage peak: protected Short circuit: protected for transistor outputs
Output	Transistor NPN (default setting)/PNP (configurable on request), open collector, max. 700 mA, NPN output: 0.2...36 V DC (default setting) PNP output: power supply frequency or switching mode
Current (according to version) (configurable on request)	4...20 mA (3 wire), sinking (default setting – configurable as sourcing on request), image of the flow velocity (default setting) max. loop impedance: 1125 Ω at 36 V DC ; 650 Ω at 24 V DC; 140 Ω at 12 V DC
Uncertainty of measurement (4...20 mA output)	±1 %
Environment	
Ambient temperature	-15...+60 °C (+5...+140 °F) (operating and storage)
Relative humidity	≤ 80 %, without condensation
Standards, directives and certifications	
Protection class	IP67 with device wired and M12 cable plug mounted and tightened IP65 (with cable gland)
Standards and directives CE	The applied standards, which verify conformity with the EU Directives, can be found on the EU Type Examination Certificate and/or the EU Declaration of conformity (if applicable) Complying with article 4, §1 of 2014/68/EU directive*
Pressure	
Certifications / Certificates on request	Inspection certificate 3.1 (acc. to EN-ISO 10204); Test report 2.2 (acc. to EN-ISO 10204); Certification of Conformity for the surface Quality (DIN4762-DIN4768-ISO/4287/1); 3 points Flow calibration certificate; FDA (only for device with EPDM seal and stainless steel fitting)

* For the 2014/68/EU pressure directive, the device can only be used under the following conditions (depends on max. pressure, pipe diameter and fluid).

Type of Fluid	Conditions
Fluid group 1, article 4, §1.c.i	DN ≤ 25
Fluid group 2, article 4, §1.c.i	DN ≤ 32 or PN*DN ≤ 1000
Fluid group 1, article 4, §1.c.ii	DN ≤ 25 or PN*DN ≤ 2000
Fluid group 2, article 4, §1.c.ii	DN ≤ 200 or PN ≤ 10 or PN*DN ≤ 5000

Pressure/temperature chart

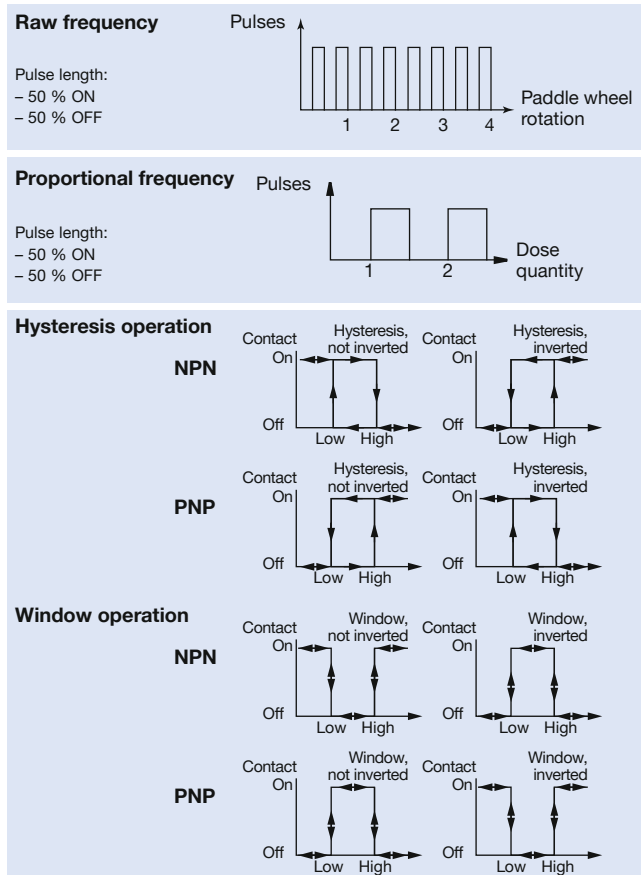

Main Features

8012 with optical (standard) or magnetic (on request) principle.

Version with transistor output:

- ▶ Transistor output: NPN (standard) or PNP (on request) operation.
- ▶ With one configured transistor output mode (4 possibilities):
 - Raw frequency (standard) – (2 pulses per paddle wheel rotation).
 - Proportional frequency (on request) – (e.g. 5 pulses per litre).
 - Switching mode:
 - 2 switching modes for the output, either hysteresis or window, inverted or not, depending on the kind of the transistor output.
 - Configurable delay before switching.

- Detection of flow direction – only with optical principle.

Version with transistor and current outputs:

Transistor output:

- ▶ Same features described as above.

Current output:

- ▶ with sinking (standard) or sourcing (on request) wiring.
- ▶ 8012 with configurable current output:
 - 4...20 mA current corresponding to paddle wheel frequency (0...250 Hz) – (standard).
 - 4...20 mA current corresponding to a flow range – (on request).

- Damping of current output signal.
- Generation of an alarm current (22 mA) – when fluid circulation is opposite to the direction indicated by the arrow on the side of the housing (only versions with optical principle) or when full scale has been exceeded (versions with optical or magnetic principle).

Design and operating principle

The 8012 flowmeter is built up with an electronic module and a measurement paddle wheel associated to a fitting. This connection is made by means of screws.

The SE12 electronic module is equipped with 2 indicator LEDs, visible by transparency under the fixed connector (standard). When the device is energized, the green indicator LED lights up and then flashes proportionally to the rotation frequency of the paddle wheel. The switch on of the red indicator LED indicates a malfunction of the device.

When liquid flows through the pipe, the paddle wheel is set in rotation. The non-wetted permanent magnets inserted in the paddle wheel generate a measuring signal which frequency is proportional to the flow velocity.

Two electronic module versions allow the following outputs:

– with one pulse output (either NPN or PNP transistor output – configurable).

An external power supply of 12...36 V DC is required. This pulse output generates a signal whose frequency is proportional to the flow velocity. It is designed for connection to any system with open collector NPN or PNP frequency input.

– with one 4...20 mA current output and one pulse output (either NPN or PNP transistor output configurable).

An external power supply of 12...36 V DC is required. The 4...20 mA output delivers a current whose value is the image of the flow velocity

The output signal is provided via a free positionable male 5-pin M12 fixed connector (or a cable gland with 1 m-length cable on request).

Installation

Minimum straight upstream and downstream distances must be observed. According to the pipe's design, necessary distances can be bigger or use a flow conditioner to obtain the best accuracy.

For more information, please refer to EN ISO 5167-1.

EN ISO 5167-1 prescribes the straight inlet and outlet distances that must be complied with when installing fittings in pipe lines in order to achieve calm flow conditions. The most important layouts that could lead to turbulence in the flow are shown below, together with the associated prescribed minimum inlet and outlet distances.

These ensure calm, problem-free measurement conditions at the measurement point.

The flowmeter can be installed in either horizontal or vertical pipes, but following additional conditions should be respected:

- always install the 8012 so that the paddle wheel axis is horizontal.
- ensure the pipe is maintained full at all times, near the device.
- ensure the pipe design does not allow the build-up of air bubbles or cavities within the medium, near the device.

Pressure and temperature ratings must be respected according to the selected fitting material. The suitable pipe size is selected using the diagram Flow/Velocity/DN. The flowmeter is not designed for gas flow measurement.

Diagram Flow/Velocity/DN

Example:

- Specification of nominal flow: 10 m³/h
- Ideal flow velocity: 2...3 m/s

For these specifications, the diagram indicates a pipe size of DN40 (or DN50 for (*) mentioned fittings).

Flow rate of fluid

- * for following fittings with:
- external threads acc. to SMS 1145
 - weld ends acc. to SMS 3008, BS4825-1/ASME BPE/DIN 11866 series C or DIN 11850 series 2/DIN 11866 series A/DIN EN 10357 series A
 - Clamp acc. to SMS 3017, BS 4825-3/ASME BPE or DIN 32676 series A

Ordering chart for 8012 with optical measuring method, 12...36 V DC, 5-pin M12

Attention!

Two versions of the fitting in DN15 and DN20 exist, having different K factors.
Only version 2, identified by the "v2" marking, is available. The "v2" marking can be found:

- on the bottom of the DN15 or DN20 fitting in plastic:

- on the side of the DN15 or DN20 fitting in metal:

Variants of flowmeter Type 8012

A 8012 flowmeter consists of:

- an **SE12 electronic module** with either optical or magnetic measuring principle, with only pulse output or with both pulse and 4...20 mA current outputs – configured as standard (see ordering chart, Type SE12) or customized (see specifications sheet on last page). The electrical connection is carried out through a 5-pin M12 fixed connector or a 1 m cable.
- an **S012 fitting** available in different materials providing many installation options of the electronic module into all pipes, ranging from DN06...DN65, due to the large range of process connections (see specification sheet on last page).
- screws and O-ring (see ordering chart for accessories).

The following charts indicate the different variants:

SE12 electronic module

Specifications	Power supply	Pipe connection	Output*	Electrical connection	Item no.

Note: Such new 8012 configuration should be ordered to your Bürkert Sales Center.

Interconnection possibilities with other Bürkert devices

Fluid block system for the 8012

The modular concept of the SE12 electronic module allows fully customized, pre-mounted and tested solutions to completely meet application needs. It is designed for being mounted in a system block, combined with other Bürkert products. This allows cost reduction and compact design for customized solutions.

Please contact your Bürkert local office to have individual counselling and engineering support in order to find the best solution corresponding to your application.
